

BusinessObjects Web Intelligence XI 3.0: Advanced Report Design

QA320V3.0

Course Description

BusinessObjects Web Intelligence™ is a query, reporting and analysis tool that allows you to access the data in your corporate databases directly from within BusinessObjects Enterprise™ InfoView and to present and analyze this information in a Web Intelligence document.

This one-day instructor-led classroom course is designed to give you the comprehensive skills needed to apply alternative query and reporting techniques when creating complex Web Intelligence documents. After completing this course, you will be able to create combined queries and use sub-queries. You will also be able to use character and date string functions, create variables using "If" logic, and redefine calculation contexts.

The course also provides an optional appendix describing how to link Web Intelligence documents using the OpenDocument URL command.

Course Audience

The target audience for this course is report designers who are experienced Web Intelligence users and who need to create complex Web Intelligence documents.

Prerequisite Education

To be successful, you must have attended the following offering or have the equivalent knowledge of:

- BusinessObjects Web Intelligence XI 3.0: Report Design

Prerequisite Knowledge/Experience

To be successful, you must have working knowledge of:

- Experience designing Web Intelligence reports

Additional Education

Not applicable for this offering.

Level, Delivery, and Duration

This advanced-level instructor-led offering is a one-day course.

Applicable Certification

Not applicable for this offering.

Course Topics

1 Reviewing Web Intelligence Core Report Design

- Reviewing knowledge gained from experience and training on Web Intelligence
- Preparing for learning advanced report design concepts

2 Advanced Query Techniques

- Using combined queries
- Using sub-queries
- Creating a query based on another query
- Changing data sources
- Understanding the impact of the query drill on performance

3 Calculation Contexts

- Understanding calculation contexts
- Redefining calculation contexts

4 Character and Date String Functions

- Using character string functions
- Using the Replace () function
- Using the Right() function
- Using the SubString() function
- Using the Pos() function
- Concatenating different character strings
- Using date functions

5 Using If Logic

- Using If() to group data
- Using the If() function to modify calculation behavior

6 Additional Reporting Techniques

- Using data tracking
- Using additional report functions

7 Creating Hyperlinks

- Understanding the options for creating hyperlinks in Web Intelligence
- Creating hyperlinks in the different Web Intelligence interfaces
